

RESTORE CIRCULATION

The Arkansas Heart Hospital's Vein & Vascular Institute is the first and only institute in Arkansas dedicated to identifying, treating and managing peripheral vascular disease (PVD) along with other circulatory conditions affecting the limbs such as chronic venous insufficiency (CVI) and lymphedema. Circulatory dysfunction can be in the arteries, veins or lymphatic systems and often lead to pain, swelling and impaired function.

THE VEIN & VASCULAR INSTITUTE PROVIDES:

- Physicians & mid-level providers dedicated to detection, treatment and management of PVD
- Compassionate & knowledgeable staff: licensed, trained & certified
- Comprehensive testing & vascular imaging
- Minimally invasive endovascular procedures
- Screening programs for at risk patients

The Vein & Vascular Institute provides complete interventional and complementary treatment options for patients suffering from decreased mobility, pain and dysfunction associated with PVD. Our multidisciplinary approach starts with early detection - the key to improved outcomes.

INDIVIDUALS RECOMMENDED FOR PAD ASSESSMENTS:

- Under 50 years of age with diabetes and history of smoking, abnormal cholesterol or high blood pressure
- 50 years or older with diabetes
- 50 years or older and current or former smoker
- 70 years or older
- Have heart disease
- Experienced a stroke/mini-stroke/TIA
- Have one or more symptoms:
 - o fatigue, heaviness, tiredness or cramping in the leg muscles (calf, thigh or buttocks) that occurs during activity such as walking and goes away with rest
 - o Foot or toe pain that often disturbs sleep
 - o Skin wounds or ulcers on the feet or toes that are slow to heal
